

SAN TECH

[SAN TECH logo]

Umujyanama w'Ubuhinzi

Kinyarwanda-first AI advisory for Rwanda's smallholder farmers

Expression of Interest · AI-Enabled Agricultural Advisory Solution Partner
C4IR / Rwanda AI Scaling Hub · October 2026

[Contact person name] · [email] · [phone] · [website]

Who we are

Company	SAN TECH <i>[Ltd / full legal name]</i>
Founded	<i>[year] · [Kigali, Rwanda]</i>
Registration (RDB)	<i>[registration number]</i>
What we do	<i>[e.g. software and AI solutions for Rwandan institutions and businesses]</i>
Focus areas	<i>[e.g. AI and data · web and mobile apps · digital public services]</i>
Team	<i>[number]</i> people · <i>[number]</i> engineers

Our mission

[e.g. Technology that works for every Rwandan, in Kinyarwanda, on any phone]

**Applying as SAN TECH
alone, not as a consortium**

Our team

[Name]

Software developer · lead engineer

Python/FastAPI, AI retrieval (RAG), Next.js, USSD/SMS

[Name]

[CEO / Managing Director]

[business, partnerships]

[Name]

[Role]

[skills]

[Name]

[Agronomist / advisor]

[crop expertise, RAB experience]

Planned for the project: an agronomist reviewer and a Kinyarwanda language reviewer to validate answers and wording.

[Names or partner organisations, if known]

The right advice isn't reaching farmers on time

35%

of 3.4 million farmers reached by 16,654 extension agents

3 in 10

calls to the agricultural call centre answered

+38%

yields among farmers served by Twigire Muhinzi

+75%

milk production among the farmers it serves

Generic

Not tailored to a farmer's soil, crop or region

Not personalised

Too few experts to fit answers to each farm

No feedback loop

Farmers' problems don't reach MINAGRI and RAB in real time

Our goal: every farmer gets timely, safe advice in Kinyarwanda on the phone they own, and their real questions reach the people who set policy.

Figures: C4IR info session, 1 October 2026

One AI brain, every user group, live today

Farmers

- Chat in Kinyarwanda and English
- Voice in and out
- Photo of a sick plant
- USSD and SMS on basic phones
- "My farm" profile for personalised advice

Extension officers

- Digital field records
- Photo second opinion
- Knowledge refresher
- Escalate recurring issues

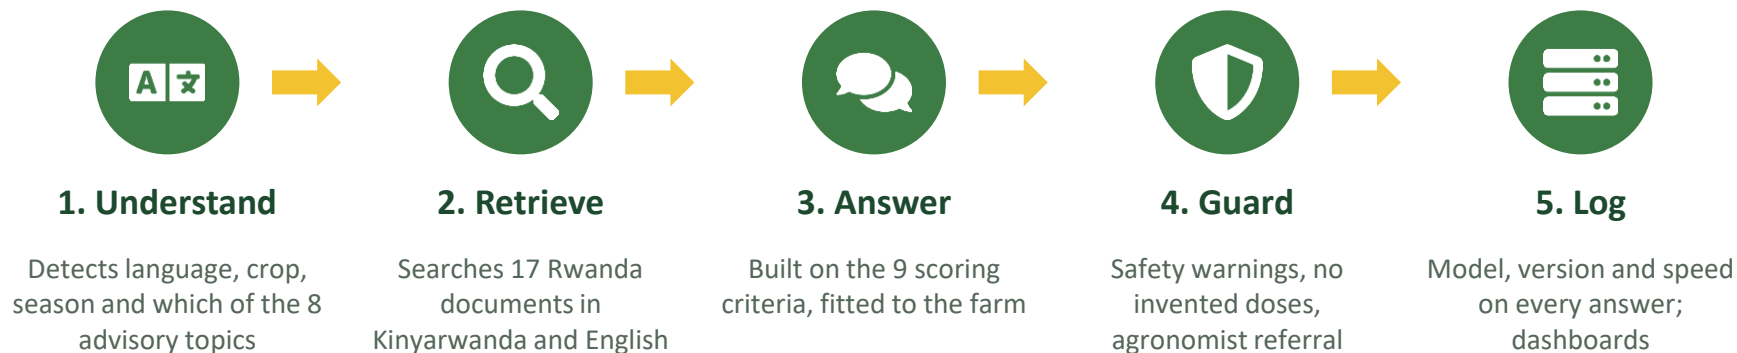

MINAGRI and RAB

- What farmers ask, live
- Trends by crop, topic, channel
- Pests seen in photos
- Knowledge gaps
- Answer officers' escalations

Live: santech-agri-advisor.vercel.app

API: santech-agri-api.onrender.com/docs

How it works

Grounded in Rwandan guidance: RAB, MINAGRI, CGIAR, CIP, FAO and CIAT documents, with sources shown on every answer.

Reliable: backup models when one is overloaded, an answer even if search fails, health checks.

Model-independent: any compatible model, including one hosted in Rwanda, by changing one setting.

Alignment with C4IR's vision

C4IR asks for	SAN TECH today	Status
Conversational AI in Kinyarwanda	Kinyarwanda-first, tested side by side with English	Yes
Strong voice (Layer 2)	Kinyarwanda speech-to-text and text-to-speech	Yes
Image-based pest identification	Photo diagnosis with a confidence level	Yes
Multi-channel delivery	Web, USSD and SMS · WhatsApp and IVR planned	Partly
Crops, pests, weather, inputs, market	Crops and pests strong · live weather and market data planned	Partly
Farmers, extension, MINAGRI/RAB	A working dashboard for each group	Yes
Rwanda's data law	No phone numbers, names or photos stored · Rwanda hosting planned	Partly
Offline-tolerant	USSD and SMS work without internet · offline app planned	Partly
Open source preferred	<i>[Open source under (licence) / available to C4IR on request]</i>	<i>[Yes]</i>

Ready for the benchmark

One secure API (X-API-Key)

`POST /ask`

Farmer questions, EN + RW,
follow-ups

`GET /health`

Readiness check before each
run

`GET /version`

Model and prompt version on
every answer

`latency_ms`

Speed recorded for every
answer

`/transcribe, /speak`

Optional voice in and out

Δ = Final – Baseline

C4IR's local data (crop registry, soil data, pest registry, QA pairs) goes into our knowledge base with one script, with no code changes.

50

questions we already test ourselves
on: 3 crops × 8 topics, in English and
Kinyarwanda, with a side-by-side
scorecard
